

Academic WordPress Website Report

1. Introduction

This website was created as part of an academic assignment to demonstrate the ability to use WordPress as a content management system. The project focuses on building a functional and informative blog-style website related to academic topics.

2. Purpose of the Website

The purpose of this website is to provide users with academic-related content such as articles, research topics, and educational materials. It also demonstrates how a blog can be structured and managed using WordPress.

3. Website Structure

The website consists of multiple pages including Home, About, Blog, and Contact. Each page serves a different purpose and contributes to the overall usability of the site.

4. Features Implemented

- Navigation menu for easy access - Blog section with posts - Embedded images and videos - Downloadable resources - Structured content using headings and lists - Contact section

5. Development Process

The website was developed using a pre-designed WordPress theme. The layout was customized using Elementor. Content such as text, images, and videos was added manually to meet project requirements.

6. Conclusion

This project helped in understanding the basics of website creation using WordPress. It also improved skills in content organization, design, and user interface structure.
